What are keyboard macros? Keyboard macros are built-in shortcuts that can be assigned to any combination of keyboard keys. Windows XP uses Ctrl+Alt+Del to trigger key macros (see KB+M). In comparison, the KeyMacro program enables to define keyboard macros by using hotkeys

and hotstrings. KeyMacro also enables to create custom keyboard shortcuts for your web browser or multimedia applications. Keyboard macros do not interfere with other programs or operating systems, however, they only work in the current context. If your working set is locked, the keyboard macro will not be triggered.
