Q: How to get a custom view group setting using Retrofit 2 We are trying to make Retrofit 2 use OkHttpClient but it doesn't seem to work properly. The only post request we currently support is POSTing to an endpoint, however if we would like to POST to a custom viewgroup it fails. I took a look at this SO post and the Retrofit team has a related blog post here that leads us to believe we need to do something to the following:

```
OkHttpClient httpClient = new OkHttpClient.Builder().build(); // this is what Retrofit expects us to do
Config.Builder base = new Config.Builder(); base.setClient(httpClient); // change the base url to use the okhttp client
HttpRequest.Builder url = HttpRequest.parse("").newBuilder();
url.host("gitlab.com").setRawPath("/api/v3/projects/xxx/"); base.setBaseUrl(url.build()); // let retrofit use the base url
OkHttpClient okHttpClient = new OkHttpClient.Builder().baseUrl(base.build()).build();
Retrofit retrofit = new Retrofit.Builder().baseUrl(base.build())
```

The mighty Seventh Allied Airborne Expeditionary Force attacked the German-held Breskens Pocket, an important bridgehead across the River Maas. Medal of Honor Airborne Full Game Download Free Don't tell anyone that its a rip of SOFCD :) I actually got told when I put it up. Since I don't tell people this, it must be a pretty good replica. Crack-FREE license. If you want to read more about the game, you can click any OK, so somehow this lovely person, probably a few of us, managed to find the save for some of you people. I'm sorry it took me so long, but I also have to admit that I was pretty stumped on a couple of them. In any event, below is the current list of the available save files, in numerical order, and the confirmed locations to retrieve them. We have listed the save's name, the location, a couple of vitals, and the person who uploaded it, if it was a giveaway. UPDATE: Link added to full path after the first save was discovered. I'll update this post. In order to get this save, you will need a serial code from GetAmp. Bit of advice: You will want to save this somewhere that is in a similar environment as where you keep the game, otherwise you will get weird files errors when you restart the game. If you save it to a USB stick, you will also be able to easily plug it into another computer and copy it to your game as well. To do this, right click the save you want to copy, and go to Properties. Then, go to the Compatibility tab and see if it is listed. If it is, then you are good to go. Alright, hope this was all straightened out! A big shout out to @DerRastler for bringing this up on Reddit, @ElijahCreed for finding the other databases, the one you are looking for, and making this possible for so many of us, and everyone else for bringing up issues and suggesting ways to fix the issue!
