A multi-platform XML-based file-creation and formatting toolkit;Q: How to tell VS Code that the file is a server built web file? I have a VS Code workspace with a website built in ASP.NET Web Forms. Now I want to create a script to open a file and it shows in the explorer view in VS Code as: WebSite1.aspx However, when I open the file I only get: WebSite1.aspx Is there a way to configure VS Code to show the full URL: For some reason VS Code is confused that the file is a server built file and will not open it. Any ideas how to solve this problem? Edit: VS Code version: Version: 1.22.1 Commit: 3b96b8cfe3 Date: 2018-08-11T09:32:18.858Z Electron: 3.0.8 Chrome: 66.0.3359.181 Node.js: 8.11.1 V8: 6.1.534.32 OS: Linux x64 2.6.32-358.3.1.el6.x86_64 A: This is fixed in v1.22.2 which will be released next week. This invention relates to a molten metal furnace for production of slag which is suitable for separating slag from molten metal. Production of molten metal by a direct reduction process usually involves a reaction chamber which contains a metal oxide and an iron-containing material, such as pig iron, steel scrap, or iron ore, mixed with a reductant. Such a process usually requires at least two stages: a first stage to reduce the metal oxide to molten metal in a reaction chamber, and a second stage to remove slag from the molten metal produced in the reaction chamber. In the second stage of the process, the molten metal produced in the first stage is cooled and solidified. The molten metal containing slag is then subjected to a separation procedure to obtain slag and molten metal. In a typical molten metal furnace, the reaction chamber is defined by a refractory-lined vessel 1d6a3396d6
