Developer Works, which provides AutoCAD documentation, software and development tools. AutoCAD is built on a software framework using Microsoft Windows operating systems. The source code is available for download as part of Autodesk Source License. Revision history The first release of AutoCAD was Autodesk's AutoCAD R18, released in 1990. This was an updated version of AutoCAD R17 which was released in 1989. Revisions were numbered using the version number (R) and the year (releasing in 1990). There were nine revisions before version 2004. After 2004, the revision number was always two digits, with a decimal point (1.2 and 1.2.1), or two digits with a leading zero (10 and 10.1). The first two digits represent the version number, and the second two represent the revision. The revision number never indicates a major revision of the software. Source code AutoCAD R18 released in 1990 was the first AutoCAD release to be distributed in source form, in a format suitable for editing and compiling. This was done to improve the source-code audit process. Prior to the R18 release, AutoCAD source was distributed as precompiled executable files. Because of the volume of source code, this could take up to five minutes to compile. In addition, source code was distributed in different languages. Before version 2007, these were: AutoLISP, Visual LISP, Visual Basic, Delphi, JBuilder, and Perl, although this last four were for legacy support reasons. From 2007, the only language supported was the Delphi version. Source code is provided to developers, and can be downloaded from Autodesk Exchange. Source code is released under the Autodesk Source License. The same license used for the Autodesk Exchange apps is also used. When new revisions of AutoCAD were released, additional source code was released to add new features. To do this, the changes to the source code are isolated from the rest of the program, and are instead stored in a set of files, called a patch. Overview Autodesk has released source code for AutoCAD every year since 1992. The source code is also available for download from the Autodesk Exchange Apps for Windows website. The first release of AutoCAD that provided source code was the AutoCAD R18 release in 1990 ca3bfb1094
