## Geometria 1 Sernesi Bollati Boringhieri 35.pdf

Grade "35. In particular, classical analysis of one and several variables, linear algebra, affine and projective geometry, general topology. § 2.3. Basic concepts in differential geometry and topology. In this section, the concept of a surface is introduced. Under the surface of the body, or the body, we mean the set  $R$ , on which the operation of the operation on the set is defined. If the set  $R$  has a finite volume, i.e. contains a finite number of elements (a finite number of points), then by the surface we mean a subset of this set (its part), in which the space is closed.
